

Module 6

Technical Workouts

1. 1. Understand Database Fundamentals

- a. What is a database
- b. Why databases are important
- c. Types of databases
- d. Relational databases
- e. Database use cases in ML

2. 2. Understand Relational Database Concepts

- a. Tables
- b. Rows and columns
- c. Primary keys
- d. Foreign keys
- e. Relationships

3. 3. Understand SQL Fundamentals

- a. SQL syntax
- b. Creating databases
- c. Creating tables
- d. Data types
- e. Constraints

4. 4. Understand CRUD Operations

- a. INSERT
- b. SELECT
- c. UPDATE
- d. DELETE
- e. Data management workflows

5. 5. Understand Filtering & Sorting

- a. WHERE clause
- b. ORDER BY
- c. LIMIT
- d. DISTINCT
- e. Practical data retrieval

6. 6. Understand Aggregate Functions

- a. COUNT
- b. SUM
- c. AVG
- d. MIN
- e. MAX

7. 7. Understand ML Data Storage Concepts

- a. Dataset storage
- b. Structured data management
- c. Data retrieval workflows
- d. Data consistency
- e. Data quality awareness
