

"### ML New Batch - Mathematics Review ### Pendings

- 1. What is an identity matrix?**
- 2. How are matrices used in machine-learning predictions?**
- 3. What is the rate of change?**

Feedback The student demonstrates a satisfactory understanding of the concepts. More practical work is required on matrix operations, feature representation, prediction calculations, slopes, and rates of change. The student should solve problems step by step and understand how each mathematical concept is applied in machine learning. Explanation and communication skills are satisfactory. ### Scores * **Practical: 6/10 *
Theory: 6/10 "**
